Ishinomaki Community & Info Center

Ishinomaki Community & Info Center (ICIC) was constructed after the Great East Japan Earthquake and subsequent tsunami of March 11th 2011 with the following aims: to act as an information resource regarding Ishinomaki itself and lessons learned from the disaster, ICIC also provides a meeting place for members of the local community to exchange ideas, particularly those affected by the disaster; and to be a convenient location for visitors from further afield to learn about the disaster and interact with the community.

Onagawa Town

Onagawa town was severely damaged by the tsunami, resulting in 847 deaths, damage to 4411 buildings. The new town development has advanced and the population has gradually returned. We will walk around and observed this development. Along the way, We will also stop at Ishinomaki City, a major city representing the northeastern part of Miyagi Prefecture, and learn the course of reconstruction.

Tohoku Electric Power Onagawa Nuclear Power Plant

At Onagawa Nuclear Power Station, which was closest to the epicenter of the Great East Japan Earthquake that occurred on March 11th , 2011 14:46, the tsunami did not go over the site , and the safety function worked as designed, causing a cold shutdown. At the site, various countermeasure constructions are currently underway for further safety and security, and it is a tour to observe the situation.
